

Classroom Blueprint

Think your classroom is too small for centers? Think again!

1. Draw a simple floor plan of your classroom.
2. Examine your classroom creatively, and highlight in green any areas you are already using effectively for centers or hands-on activities.
3. Using a yellow marker, highlight areas that could be used for centers or hands-on activities.
4. Using information from this session, determine how you could better use the space you have and what you could do to maximize hands-on learning in your classroom.
